

# AGILE NetView

## Product Specification Data Sheet

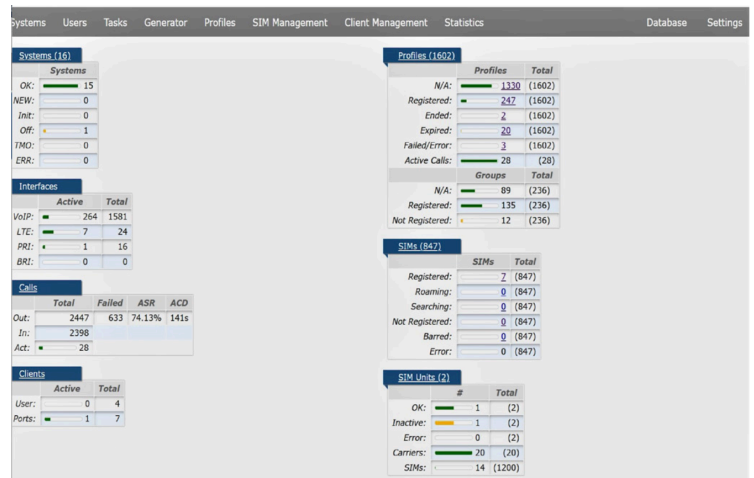

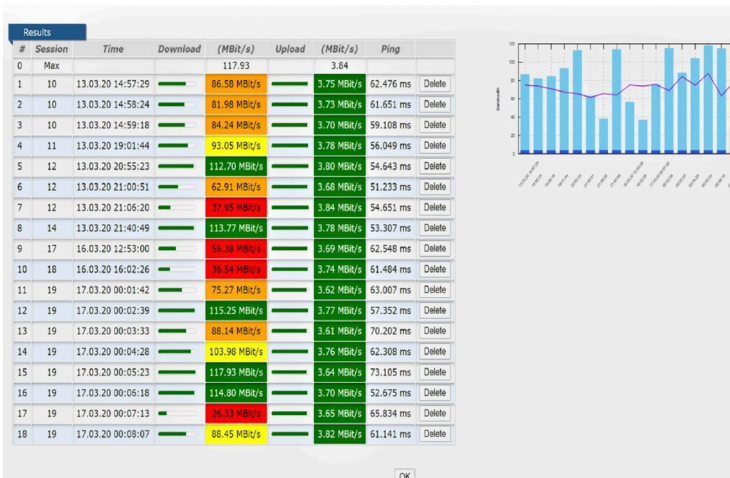

Billet milled aluminum case for mobile, portable and office applications

The AGILE NetView management system is the datacenter hub for all AGILE field communications gear. The NetView Server extends the native functionality of Mobile CORE, Twin CORE, Marine CORE, CORE CommsKit and CORE Patrol systems with additional, remotely hosted software and features.

NetView is the registration point that the field unit's check-in with, as they power up and while they are in operation. NetView enables advanced functionality such as remote monitoring, system configuration, and system updates greatly reducing the amount of physical management and maintenance required.

- See the status of all NetView systems in your network.
- Configuration management includes bulk installations, automatic update, call home and remote provisioning.
- Intuitive drag and drop Windows for street-free use and simplified training.
- Accounting management includes management of call detail records, performance management and extensive customizable statistics.

## WE ARE AGILE

We engineer the hardware. We design the software.  
We build the solution. With committed support
