

AGILE CORE Optika

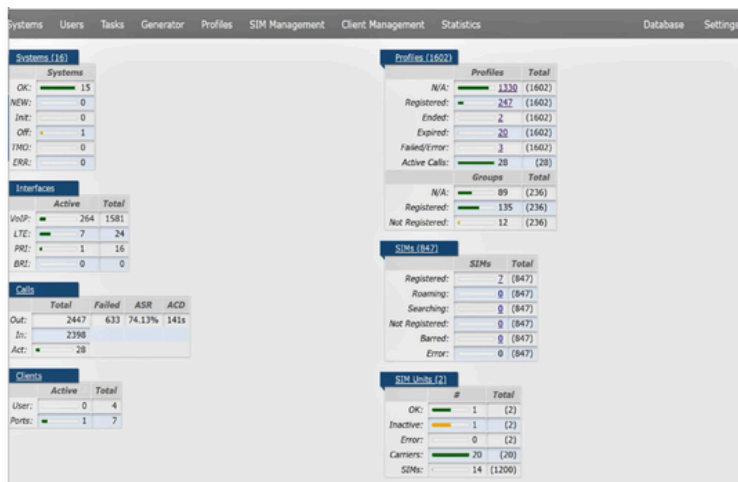

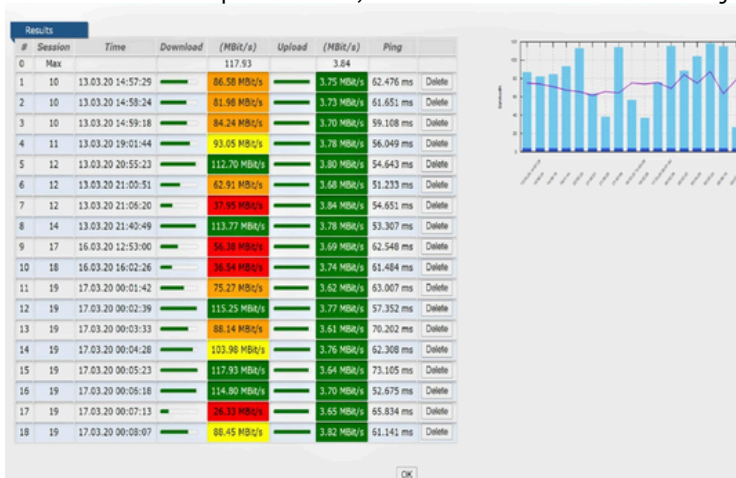

Product Specification Data Sheet AGILE CORE Network Management System

The AGILE CORE Optika management system functions as the central data hub for all AGILE field communication equipment. The CORE Optika Server augments the capabilities of Mobile CORE, Twin CORE, Marine CORE, CORE CommsKit, and CORE Patrol systems through the provision of additional, remotely hosted software and features.

CORE Optika functions as the registration hub for field units, facilitating check-ins upon activation and during ongoing operation. It supports advanced functionalities, including remote monitoring, system configuration, and updates, thereby minimizing the requirement for on-site management and maintenance.

- Comprehensive status report encompassing all CORE systems within your infrastructure.
- CORE Optika configuration management features encompass mass deployments, automated upgrades, remote diagnostics, and distant setup.
- User-friendly, drag-and-drop interface for easy operation and training.
- The accounting management features encompass call detail record management, performance monitoring, and comprehensive, customizable statistical analysis.

WE ARE AGILE

We engineer the hardware. We design the software.
We build the solution. With committed support
